Part 3 — JavaScript, SEO, Functionality and Testing

Hlanganani Community Food Garden | WEDE5020 Website Project

JavaScript deliverables

Mobile navigation toggle; dynamic footer year; client-side enquiry validation; accessible live form feedback.

SEO deliverables

robots.txt; sitemap.xml listing five pages; page titles; meta descriptions; canonical URL placeholders. Replace YOUR-PUBLISHED-DOMAIN after deployment.

Functionality

The website navigation and client-side form validation are implemented. The enquiry form does not transmit or store messages; a real submission service must be configured if required.

Testing evidence still required

Run the tests and complete docs/TEST-RESULTS-TEMPLATE.md. Capture genuine desktop, tablet and mobile screenshots, menu-open state, invalid-form state and valid-demo state. These are not fabricated in this package.

Before submission

Replace canonical and sitemap placeholders; verify project facts and contact information; run the tests; add screenshots; check the lecturer's exact rubric for any additional evidence requirements.
